DAFFODILS

1. The latest edition of 'Daffodils to Show and Grow' and 'The International Daffodil Register' published by The Royal Horticultural Society and any subsequent supplementary lists published will be followed throughout the Schedule and cultivars **MUST** be exhibited according to the classification there given.
2. Colours applicable to the description of daffodil cultivars are abbreviated as follows:-

W - white or whitish	P - pink
G - green	O - orange
Y - yellow	R - red
3. For purposes of description, the daffodil flower shall be divided into perianth and corona.
4. The perianth shall be described by the letter or letters of the colour code most appropriate.
5. The corona shall be divided into three zones: an eye zone, a mid-zone and the edge or rim. Suitable coded colour descriptions shall describe the three zones, beginning with the eye zone and extending to the rim.
6. The letter or letters of the colour code most accurately describing the perianth shall follow the division designation.
7. The letters of the colour code most accurately describing the zones of the corona shall then follow, from the eye zone to the rim, separated from the perianth letters by a hyphen. In Division IV, the letters of the colour code most accurately describing the admixture of petals and petaloids replacing the corona shall follow in proper order, using 3, 2 or 1 colour code as appropriate.
8. If the corona is substantially of a single colour, a single letter of the colour code shall be used to describe it.
9. Meaning of 'predominant' - A colour (red, pink or orange) is predominant if it extends to not less than half the length of the corona or cup. In classes for cultivars with pink colouring in the corona, judges will prefer blooms of a clear pink to those of a 'muddy' indefinite colour.
10. For definitions of miniatures, intermediate and restricted see latest issue of list of approved cultivars.
